Articles in Advance

In an effort to continue the mission of education of the OR/MS community, INFORMS has initiated *Articles in Advance*, the release of peer-reviewed, revised, typeset, copyedited, and author-approved articles made available online in advance of their appearance in a print or online issue. The content of the Articles in Advance version of an article is the same that will appear in the print and online issue of the journal, minus the assignment of page numbers and volume/issue numbers. Articles will remain in the journal's Articles in Advance section until selected for an issue by the journal's editor-in-chief and published within that issue.

How can readers access my article while it is in Articles in Advance?

The full text of an article appearing in Articles in Advance is available through all of the same access channels available for accessing an article once it appears in an issue. As with all content published by INFORMS, the abstract is made freely available worldwide and searchable through Internet search engines and other content referrers and indices. The full text of the article is available through member or institutional subscription to the journal in which your article will appear, or through pay-per-view. Readers can be directed to specific articles appearing in Articles in Advance through the article's digital object identifier (DOI).

What is a DOI?

A DOI (digital object identifier) is simply a unique identifier for an electronic document that stays with the article throughout its entire life. When an article is sent into production, the INFORMS publications department assigns it a DOI and when that article is published online in Articles in Advance, it is registered with the International DOI Foundation and CrossRef. CrossRef allows other publishers to link their references to the article whenever the article is cited.

To access an article via its DOI, visit **http://dx.doi.org/** and insert the DOI of any INFORMS journal's article, e.g., "10.1287/mnsc.1060.0655." Doing so will take the user straight to the article online, whether it's still in Articles in Advance or has been moved into an issue. The DOI will never change, so it will always go to that article, 1 month, 1 year, or 10 years after publication. This same number can be entered in an Internet search engine with similar results.

What happens if I find an error in an article after it has gone live?

It is important that the version of the paper that appears in the Articles in Advance is considered complete and final and cannot be changed—in the same way you would not expect to be able to

change a printed page. Therefore any errors found must be dealt with in the usual way—by publishing errata or corrigenda.

May I post the Articles in Advance version on my personal website?

No. We must require authors to refrain from posting the Articles in Advance version to their personal websites, scholarly collaboration networks, or institutional repositories, or other Internet content distribution systems. Authors are permitted to post their author accepted manuscript (AAM) on personal websites, scholarly collaboration networks, or noncommercial institutional repositories—posted AAMs must include the DOI provided by INFORMS to the final published version of record. Authors may not post their Article in Advance or final published version of record except where authorized under an **INFORMS Open Option** open access publication license.

What happens to the Articles in Advance articles when the print/online issue is published?

When the issue is published, a new set of electronic files is posted online. These are the same articles, but with bibliographic data now that they are in published within an issue. Each article's DOI is used to search for its equivalent and the links to duplicate papers are then removed. Hence the article only ever appears in one place at one time.

If an article is published online before it goes into an issue, how can authors cite the work?

Although Articles in Advance articles do not have bibliographic information associated with them (i.e. volume/issue numbers, page ranges), they can still be cited by means of their DOI (digital object identifier). This number will stay with the article throughout its life, even when it has been published in a print or online issue. Therefore, citations that were made before an article was published in print will still enable readers to access the article when it has been moved to its final issue.
